Fasteners and Weld Studs

Since 1928

September 18, 2009

Dear Customer;

Tru-Weld had been manufacturing weld studs since 1959 and today is one of the largest suppliers of weld studs in the world. We qualify our entire weld stud line to domestic and international standards to include; American Welding Society (AWS) D1.1, D1.5, D1.6, ISO 13918, British Standards BS5400, (BS5950) Din and EN 1002-1. We are also certified and approved by the International Code Council (ICC), Canadian Welding Bureau (CWB) and customer approved to the Nuclear Quality Assurance standard (ASME NQA-1). Tru-Weld has annual independently certified manufacturers weld base qualifications certifications on file for customer distribution.

Tru-Weld produces a full line of concrete anchors, shear connects, deformed bar anchors, threaded studs, and PSR studs in Medina, Ohio. We use only the highest quality domestic low carbon raw material both melted and manufactured in the USA. Our in-house, full service tool room supports our manufacturing process, which assures tooling accuracy to produce the highest quality products and provide our customers with quick response time for non-standard sizes. We have numerous cold forming machines to meet customer demands for the complete variety of product required at any time. To ensure our customers the total quality in their stud welding requirements; we produce our own ceramic ferrules, which have an important function in the successful installation of the stud welded fastener. We also produce our own Tru-Weld line of stud welding equipment and accessories for one source convenience to our customers.

Just as your company strives to provide the best products and service to your customers, we at Tru-Weld are committed to that goal as well. For your quality assurance we provide complete traceability and compliance to assure that you can incorporate our weld studs into your assemblies with full confidence of conformance and reliability.

In these economic times there is a temptation by some suppliers and customers to use materials or processes that may jeopardize the quality, traceability and reliability of the products which they supply to their customers. We at Tru-Weld have never subscribed to this philosophy. We have been a family business since our beginning in 1928 and remain so today. It is not only the reputation and responsibility of a company that our products represent; they also represent the moral responsibility to our customers to provide the absolute best we can produce.

Fasteners and Weld Studs

Since 1928

With this in mind we at Tru-Weld invite you, our valued customer, to our facility for a quality audit. We will be honored to provide you with a plant tour so that you can witness, in person, how our studs are produced and how we handle material control, traceability, packaging and documentation. We want you to have complete confidence that you are partnering with a company who shares your same ideals for quality and service.

Please contact me personally so we can schedule and plan for your visit.

Best regards,

Pete Workman
Vice President
Tru-Weld Division
